Dear Ed:

Re: "Versamat" or RT-12

25X1A [] As you know we have ordered for, and are providing to, 25X1A
[] a roller transport processor, now termed the Versamat.
This is a new machine (we obtained serial Nbr. 1 for []) but its principle is that of the X-OMAT, hundreds of which are
in use. It strikes me as a very versatile piece of equipment. 25X1A
25X1A It is also evident that [] will have many diversified prob-
lems. Furthermore, I think this machine offers possibilities of
exploitation for "exotic" processing.

25X1 I, therefore, recommend that we be authorized (under
EG-400 or PO-1200) to procure one of these machines at a cost
of [] for in-house use to solve problems for [] and 25X1
for development studies.
